

Barry Carlyon for Technical Officer (Web) 2008-09

As a member of Student Radio for three years, I have been entirely responsible for the LSRfm.com (Leeds Student Radio) website, for those three years, also at one time or another I have briefly been responsible for Fresh Air and Burn FM's websites, further more I am responsible for several Union Society Websites at Leeds University Student Union.

During this time I have improved my knowledge of web technologies, and how best to present different information, and layout of websites for the best user interaction.

My skills as a webmaster and web developer include:

- XHTML 1 (Strict)
- CSS (2 and 3)
- PHP (4 and 5)
- JavaScript
- Flash

As well as a smattering of different languages, often of a niche value, (hence I shall not list them here)

If given the chance to manage the Student Radio Website and Forums, I would:

- Improve inter linking between the services the website provide,
- Make finding information easier,
- Make finding of documents easier,
- Transfer the forum to the much better phpBB brand of forums.
- Highlight the New SRA Chart Website,

Given a through review of the site, I would not object to a redesign or rebuild of the site, after consultation with the SRA Exec and any Interested Stations.

The website should be **About** the Member Stations, **For** the Member Stations
